MORELIA, Mich., December 16, 2020.- In the last nine months of this 2020 there have been scenarios of change in the educational field due to the Covid 19 pandemic in the world and that has affected students of all the levels.

In the conferences of the Instituto Tecnológico de Monterrey, within its International Congress on Educational Innovation (CIIE) 2020, this Wednesday corresponded to the topic The new era of education, in a discussion with the CEO of McGraw-Hill, Simon Allen.

In this showcase, he explained that the health contingency led to parents and teachers joining together to continue the process of teaching students, and in this area, the company was also favored by the increase in consultations.

“The dynamics on the issue of access to school supplies has changed, especially in the change of an online education.”

He also commented that it is also an important challenge to address, by the authorities, the fight against backwardness, since it is not desirable for this to return, once the health emergency is controlled, and for this the role of the parents.

As a company focused on the field of dissemination of educational material, it stated that they had a 30 percent increase in the consultation of their online content, and that encourages them to improve their platform and facilitate access to all equally.

“The good news is that the gaps are closing in the issue of access to technologies; what we have seen in nine months was a significant gap that has been combated; the issue of access to technology is important to be addressed by the authorities to strengthen this learning dynamic, “he insisted.
