mo una serie di servizi alternativi
e personalizzati ai nostri clienti.

This measure is designed to assess the extent to which the respondent is able to perform the activities of daily living (ADL) that are necessary for independent living. The measure is based on the ADL scale of the Functional Status Inventory (FSI) (1990) and is a 10-item scale. The items are: (1) walking, (2) dressing, (3) grooming, (4) eating, (5) transferring, (6) bathing, (7) continence, (8) communication, (9) mobility, and (10) self-care. The scale is scored from 0 to 10, with 0 representing the lowest level of functioning and 10 representing the highest level of functioning. The scale is a reliable measure of ADL, with a Cronbach's alpha of .92.
